# SenseAnywhere
for Supply Chain Logistics

1. Validated Real-Time Monitoring

Real-time SenseAnywhere devices, activated throughout your fleet, provide immediate, reliable temperature and humidity monitoring while on the road. Reduce costly excursions and prevent product loss with secure 24-7 access to your data, alarms and GPS coordinates from your desktop or any smart device at any time, even while in transit.

3 Steps to Creating a GMP Fleet

A GMP compliant fleet is necessary to maintain the safety of your products in transport. The SenseAnywhere monitoring system will ensure your fleet's internal environment stays on target. Drive down expenses, increase efficiency in your supply chain, and stand out as an industry leader with SenseAnywhere.

2. Temperature Mapping

Temperature mapping your trucks and trailers proves that product can be stored within specified conditions and determines best locations for monitoring sensor placement.

3. Accredited Calibration

ISO 17025 accredited calibration is a critical step in ensuring the accuracy of your monitoring data. Every SenseAnywhere sensor is calibrated in a NVLAP/NIST accredited metrology lab and meets the highest accuracy standards in the industry.
